

Question 29

- (a) From these articles, identify two responses of plants to temperature change. 2

Activating hundreds of genes & deactivating others.

- (b) Evaluate the relevance of the information to your report, and the reliability of each of the sources given. 5

Plants give out responses from the many temperature changes and climatic conditions. As plants can activate new genes, they are able to cope better and grow with little stress. The information also shows us that different places in the world can also have a great affect on the plant.

Some of the sources are reliable. Article 3 being the less trustworthy as it does not give out a clear enough response compared to articles 1 & 2.
