

Question 29

- (a) From these articles, identify two responses of plants to temperature change. 2

* When flowering plants wait for the optimal temperature.
* alterations in plant photosynthesis

- (b) Evaluate the relevance of the information to your report, and the reliability of each of the sources given. 5

* The relevance of these reports would vary according to your individual's: a farmer would find this highly relevant whilst a fisherman may not.

* article 2 is probably the most reliable of these sources because they would have access to the source data of the writer whilst article 1 would probably have to rely on the individual's integrity. Article 3 is not very reliable as their are pages on wikipedia which claim the Eiffel tower is made of bread sticks
