Start here.
a) sodium hydroxide is produced from the process shown
the main readant is brine (concentrated southwater) electrolysis
is used to seperate the chlorive from the brine and
this is separated by a sodium amalgem which shorty lds
Particular elbrandents theo wars through . it then goes
who a decomposer and we are left with sodium hydroxide.
b) molter sodium chloride is different to getting
Sodium hydroxide in that sodium chloride is gained
From salt pools where the it is evaporated and then
made more concendrated NaCl2+ +ARHZO -> NaE/2+ +A/1/20
Por example which means it's twice as concentrated.
(): SO3 => SO2 pok=:2mol
