Ecosystems

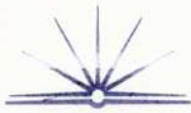

Ecosystems are found all over the world. Some of these ecosystems are untouched by human inhabitants, others however are affected by human which in the end could lead to destroying the beautiful place. These human impacts could be either good or bad but either way it affects the rate of

Human impacts on Bicentennial Park / Homebush

Bicentennial Park was once a place that was not touched by humans. Then it was a place where aboriginals lived for many years. Living off the land only taking what was needed never more never less.

int.
Then Europeans took over & many believe the world was changed then. Bicentennial Park was cleared & turned into a place where factories & even an abbitour was created. Until many years later when the land was reclaimed & was protected from damage. Just these few things that humans did have & will always change the nature of this once untouched place. Today however bicentennial park is a study centre where a diverse group of plants & animals live & are always being watched to see if things can be done for their survival in times to come.

Human Impacts on Sand Dunes

Sand Dunes are found around nearly every continent around the world.

Humans impact dramatically on the changing nature of these ecosystems so things humans do to the ecosystems are

humans pollute these places causing build up which in the end can lead to the pollution being embanked in the sand suffocating plant species or the pollution can be washed down to sea which can lead to species of fish & water plant life being effected, leading to birds being effected then other animals affected with diseases.

ont

human always want to live on the beach & will do anything to live there this thinking leads to clearing of plants which keep the ground stable. Infrastructure is built so that human can have there dream home on the beach. But this can wreck the sand dunes forever.

Just these few things can change sand dunes forever & its all because of humans.

Conclusion

In conclusion although humans do do alot of good things for the environment sometimes it just turns out to be good things for the humans not necessarily the environment. Humans do however destroy the environments around us if they no it or not even if they mean it or not
