

Question 23

a) When conducting a feasibility for the development of an information system to support it's planned new business, the criteria it should consider would be making sure enough students would be interested in the internet-based business.

Considering whether students would be able to stay after school for the online tutorial support, e-mail support, a news group, access to a large collection of electronic books, teacher notes, student assignments and computer software.

It should then start considering making application forms, notifying the students, allowing them to have enough time and being aware of how it will be operating

The high school students should be aware of how they are going to run this and whether it will benefit the other students.

It should consider in making a time table for each of the students involved using a database. This time-

table should also be carried out to the high school students who plan on running a Internet-based business.

b) The business initiative from social and ethical perspectives would be the cost of running this internet based business. ~~is~~ The High school students would have to consider if students can afford to pay that price. If not, there won't many students involved therefore it won't ~~much~~ be much of a benefit.

The location of this plan would have to be considered, would students be able to make travel arrangements to ~~that~~ the location as it will be an after school program.
