

24 a Parity checking - method for checking for errors using an additional bit called a parity bit.  
Cyclic redundancy check - method for checking for error, using a division process.

- b
- Application software, - use microsoft excel in order to organise data, cell references, operators and functions can be used.
  - Organise separate statements of each credit card, so you can see how much people are spending.
  - store files on disk of statements of those peoples credit cards.
  - Create a database for all credit card holders, so you can retrieve information when necessary.
  - In processing, set up a mail merge in Microsoft Access, so you can process statements through the mail much easier.
  - Process statements ~~that~~ ~~are~~ to the credit card holders who are spending to much money.

~~② Address - the whereabouts of where the person lives~~

~~Subject - details the topic~~

~~Message - the ~~text~~ types makes a comment~~

~~Feeds - ~~people~~ make things easier.~~

③ John doesn't have an email, so people talk about him behind his back. He is not up to date with technology cause he doesn't have an e-mail account. John gets left out in situations, he is the lower person in the employed group.

Pat and Sam want to get rid of him, cause they don't understand ~~him~~ John.

Pat and Sam are looking for someone up to date with technology and want someone to talk to electronically.
