 Question Number: **21**

b). A new database system would need to be developed or remodelled to add the new components of the new detection technologies.

c). Phased Rollout
 staggered straight

~~Quality if changed is more wrong, don't loose data. However it is quick and less cost is wasted.~~

This means that it starts off with one and slowly the new cameras would be installed. If the system is successful.

Reason for doing it this way by 'rolling' out across the state' is to make sure it works well first before going to put them up every-where else.

c). Social + ethical issue if you were the driver and got caught would be, were there any signs, warnings or notifications regarding the changes of the red lights, that are now speed cameras. Were there any new notification telling how they worked etc.

Additional writing space on back page.
