Question Number: **21**

a)

b) Road sensors, digital imaging devices (camera), software to analyse the image and readings from the sensors.

c) This method is called "Pilot conversion" when a fully-working system is implemented in a limited area. It helps to identify any errors and corrections ^{needed} for the system before it is too late (e.g. installed all across the country). The risks of the project is minimised in this way.

d) wide implementation of this system might lead to ~~changes~~ in the organisational structure of the corresponding organisation and might loss of jobs of the police officers whose job was to identify over-speeding cars, etc.
