Question Number: **21**

b) The IT used by the system will include the new camera (hardware) the different detection technologies such as road sensors (hardware) software will be required to view the image eg Adobe picture viewer

c) The method that is being used is pivotal. This is a wise decision because if there are any faults in the system they can be fixed. The new system should be on trial for a specific time frame eg 60 days. Overall this method of conversion should be successful in bringing the new system into action throughout the whole state.

d) Due to the precise nature of the new system some drivers may be outraged because the new system does not allow for any mistakes. eg If a driver accidentally goes through a red light they will still be booked. Also speed camera system does not give any room for error even if the driver is 1 km of the speed limit they will be charged. The new system should give some room for error. eg drivers should not be charged unless they are 5 km over the speed limit.
