Question Number: **23**

a) The use of a drop down ~~men~~ list reduces data entry errors for & which state the resident lives in. It is appropriate as there is only a limited amount of Australian states as well as it ensures that the data entry for all who live in the same state is the same.

b) The use of images were used to:

- Provide a some area of appeal for the eye - rather than having all text in the calculator.
- For question seven → provides what type of quantities is being asked about (allows for more accurate data)
- Interactivating of the calculator.

c)

~~Part (a)~~ d)

Analysing processes occur through:

- Accumulating all the input data in all the sections and calculating each total
- Comparing the results of the individual to the average ~~of~~ found
- ~~Identifying~~ the system identifying methods for the person to cut down emissions.
