Start here.

a)

i) It is a code put into a Radio Frequency to allow it to be Identified and pick up by receivers

ii) Transaction logs are used to record Information about transactions to people can access when it was made and what was transacted for how much.
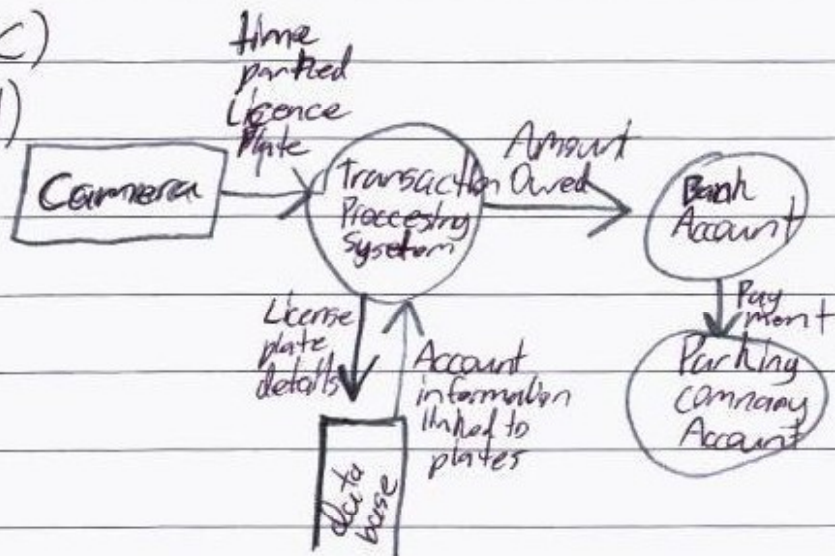

1b)

i) A transaction system, that needs real time processing is when the Information need to be constantly updated for the users involved e.g. an online auction.

ii) Batch transactions are best for transactions that don't need to be updated often e.g. pay check are better done weekly because people don't work a job every day.

c)

i)

ii)

The Licence plate information for the person
is collected and stored on their account

When they park the camera collects their ^(time parked and) licence
plate, ~~uses it~~ the system uses it retrieve
their account and Debit ~~a~~ card details and
sends it to billing.

iii)

This technology could be used to make
things easier in under ground parking
so ~~the~~ people would no longer need to worry
about time cards and going to the
payment ~~bo~~the boothe.
