

Question 4.

a) $|x-1| \geq 3$

$x-1 \geq 3$

$-x+1 \geq 3$

$\therefore x \geq 4$

$-x \geq 2$

$\therefore x \leq -2$

b) $\cos \theta = \frac{2}{5} = 0$

$\therefore \cos \theta = \frac{2}{5}$

$\therefore \theta = 66^\circ 25', 293^\circ 35'$

$\therefore \theta = 66^\circ, 294^\circ$

c) $MN^2 = 8.9^2 + 5.2^2 - 2(5.2 \times 8.9) \cos 110^\circ$

$= 106.25 - 92.52 \cos 110$

$\therefore MN^2 = 137.8937$

$\therefore MN = 11.74 \text{ (2 d.p.)}$

$$(ii) A = \frac{1}{2} bc \sin A$$

$$= \frac{1}{2} \times 8.9 \times 5.2 \sin 110$$

$$= \frac{1}{2} \times 46.28 \times 0.939$$

$$\therefore A = 21.74 \text{ m}^2$$

$$\Delta \therefore A = 21.74 \text{ m}^2$$

$$d) (i) y = 2x - \textcircled{1}$$

$$y = 6x - x^2 - \textcircled{2}$$

sub $\textcircled{1}$ into $\textcircled{2}$

$$\therefore 2x = 6x - x^2$$

$$\therefore x^2 - 4x = 0$$

$$\therefore x(x - 4) = 0$$

$$\therefore x = 0, 4$$

$$\therefore y = 0, \text{ or } y = 2(4) = 8$$

$\therefore B(4, 8)$ as $(0, 0)$ is the origin.

$$(ii) A = \int_0^4 (6x - x^2) dx - \int_0^4 (2x) dx$$

$$= \left[\frac{6x^2}{2} - \frac{x^3}{3} \right]_0^4 - \left[\frac{2x^2}{2} \right]_0^4$$

$$= \left[3x^2 - \frac{1}{3}x^3 \right]_0^4 - \left[x^2 \right]_0^4$$

$$= \left[48 - \frac{64}{3} \right] - 16$$

$$\therefore A = 48 - \frac{64}{3} - 16 = 10 \frac{2}{3} \text{ units}^2$$
