

B/61

Albert Speer was a talented and educated young architect. After attending a Nazi Party rally out of curiosity Albert Speer became known to Hitler due to a common love of architecture. Albert Speer was given the job to build Hitler's monumental structures, Albert Speer delivered what Hitler wanted when he wanted, -big, huge and fast - Hitler appointed Speer as General Building ^{inspector} ~~inspector~~ (GBI) so that he could oversee the construction of these buildings without the hassle of red tape and also the restructuring of major cities and whole towns (however this did not happen due to cost of war).

Speer created Hitler's big buildings that inspired a feeling of German superiority within the people and also

within foreigners. It created a sense of nationalism within the German Community. Speer achieved these goals by working men around the clock. It was his superior organisational skills and ability to deliver that ~~was~~ ^{made} him the obvious ^{and only} choice as Todt's replacement as Munitions and Armaments minister. Speer put into place Todt's reforms that were planned before his death. This ~~saw~~ ^{saw} the introduction of production lines in factories, simpler models of weaponry used and mass produced. This saw a massive increase in production and efficiency. ~~was~~

Speer ~~was~~ exceeded expectations in both his jobs. He succeeded in both roles as General Building Inspector and Minister of Armaments and Munitions. He had a successful career until the war came to an end. Germany didn't have the resources to match the fresh resources of the Allied forces due to Americans joining the allies.
