C) Technology has shaped work and leisure the way we see it today and will continue to have an enormous impact on it in the future. Business's are evolving rapidly, buildings getting larger and more complex, more franchises in different parts of the world, technological implements growing by the minute. It's hard to imagine what it will be like in 100 years time. If technology keeps evolving at the rate it is now the possibilities are endless. Cars for example, automobiles have improved greatly over the past 50 years, and it all has to do with changing technology. More advanced engine and computer systems, safety ratings increased by about 200 percent, and style and capability is unbelievable. At the moment car companies have began thinking about electric powered cars, with a few on the market the future is pretty much decided. The technology capable of making an electric car that folds up to the size of a briefcase, who knows what the future will hold.

Computers and security systems have advanced dramatically and will continue to do so throughout the years to come. Robotics is also being tested and said to be a big hit in the future. Japan is the home to some of the most

intelligent robots on the globe and scientist say that life on earth in the future may be solely based around robotics and the extreme advancements in technology.
