12 A business uses a payroll program to prepare employee wages. This process involves entering the name and the number of hours worked for each employee. The payroll program progressively calculates the amount owing to each employee. When a negative number is entered for the hours worked, the amount owing to each employee is printed.

To achieve this task, what control structure would be used?

(A) Sequence only

✓ (B) Pre-test repetition

(C) Multiple selection

✓ (D) Post-test repetition

Question 12 : % answers correct by band range
