The table and graph show, for the groups of students whose marks in the examination corresponded to the borderline between two bands, what percentages of each group selected the responses $A, B, C$ and $D . N$ is used to identify: No valid response.
Note that apparent anomalies in the table and graph, such as $0 \%$ or $100 \%$ of students choosing a particular response, can occur when there are no students (or very few students) who scored the particular examination mark associated with that borderline.
