

B) * Air quality, can be a major issue within the work shop, this is because of the poisons gases from car's exhaust, fumes from chemicals such as brake cleaners. All of these are poisons for humans, and to help prevent this problem is a well ventilated work shop.

* Hazardous materials (chemicals) Every engine has something in common, it needs oil, and fuel. Two poisons chemicals that can nearly be found in any home, especially on Automotive workshop. These chemicals are both flammable and poisons and should be stored safely.

* Noise, what is generated from car engines and the exhaust, but even louder is an rattle gun, which is powered by pressurized air rushing through a small valve. Ear plugs are highly recommended for an Automotive workshop.
